To Whom It May Concern:

The active ingredient of Rely+On™ Perasafe™ is peracetic acid, which is generated when the powder is diluted in water and gives rise to the characteristic odour.

Peracetic acid has extensive uses as a disinfectant in many important areas of infection control, such as food and beverage production and hospital hygiene, and has been chosen due to a number of favourable properties, including a broad-spectrum of activity, rapid speed of action, and good toxicological profile.

Specifically, according to the harmonised list of classifications ascribed in Annex VI of Regulation (EC) No 1272/2008 (as amended), peracetic acid is not classified as carcinogenic, mutagenic or toxic to reproduction (CMR). As a result, no specific concerns for the health and development of the unborn child are expected.

As with the use of all hazardous products, care should be taken by all users to follow risk management measures defined in your chemical risk assessment.

Sincerely

Andrew Jenkins

EMEA Product Stewardship and Regulatory Manager
